Supplementary Appendix, Figure 1

Lateral radiographs of the spine: (A) cervical, (B) thoracic, and (C) lumbar demonstrate diffuse osteosclerosis of the vertebral bodies and neural arches. Small bony excrescences project off the neural arches and bodies in the cervical spine.

**Supplementary Appendix, Figure 2**

Postero-anterior radiograph of the chest shows diffuse sclerosis of the ribs. Not shown, multiple small bony proliferations project off the ribs, scapulae, each upper humerus, and the clavicles.

**Supplementary Appendix, Figure 3**

Anteroposterior radiograph of the lumbar spine demonstrates diffuse osteosclerosis (small bone excrescences are not shown).
